

COMPENSATION PROJECT

CliMates

Establishing climate-resistant mixed forests through reforestation and managed natural regeneration in combination with sustainable harvesting methods in Germany and Tanzania.

GENERAL PROJECT INFORMATION

Project Type	Reforestation
Location	Germany, Tanzania
Project Size	11,394.85 ha
Emission Reduction	2,468,673.68 t CO ₂
Standards	Verified Carbon Standard*, ISO 14064-2, FSC * Offsetting is achieved only through carbon credits from the ICROA-endorsed carbon standard.

ABOUT THIS PROJECT

Re-Spire Westerwald, Germany

The project area is located in the Palatinate part of the Westerwald and has been massively damaged by storms, droughts and bark beetles since 2018. Through the establishment and long-term maintenance of climate tolerant tree species and an adapted wildlife management, it is being ensured that a climate-resilient mixed forest develops on these areas, storing carbon in the long run, providing high-quality habitat and recreational space, and promoting biodiversity.

Uchindile & Mapanda, Tanzania

This reforestation project in the southern highlands of Tanzania establishes pine and eucalyptus forests on formerly degraded grasslands, creating increased carbon storage capacity on the project site. The sustainable management promotes forest regeneration while improving economic and social conditions of surrounding communities.

Benno Fuchs
Director Partnerships

FORLIANCE offers companies successful solutions for climate protection. To achieve this, our team of international experts develops together with you individual climate protection strategies and projects – for 20 years now.

CONTACT US NOW!

**RE-SPIRE
WESTERWALD**

- Creating a diverse recreational area for the local population
- Establishing a high-quality habitat for greater biodiversity of flora and fauna
- Promoting the sustainable timber production as an environmentally friendly construction material
- Removing carbon dioxide from the atmosphere and long-term natural carbon storage

UCHINDILE & MAPANDA

- Supporting local communities by providing secure jobs, building schools and health centers
- Additionally preserving natural habitats for flora and fauna on 7,200 ha
- Promoting gender equality through equal employment opportunities for women
- Training communities on biodiversity conservation, sustainable forest management, and forest fire risks

This project focuses on the following Sustainable Development Goals:
